ZEV Slides and OZ9 Holster Fitment

The OZ9 Standard, OZ9C Compact, and OZ9 V2 will fit most Glock pattern holsters. Tight-fitting Kydex holsters specifically designed for Gen 3 or 4 Glockes may not fit or will generally require more fitting and retention adjustment than a Gen 5 holster would. Light-bearing holsters tend to be more forgiving.

For any questions, please contact us directly. <https://www.zevtechnologies.com/contact>

Notes: Holster fitment is not affected by the grip kit installed on the OZ9.

The OZ9C Compact and the V2 Elite Series use the same frame and can use either the Compact grip kit for G19 magazines or the X-Grip for G17 magazines.

The OZ9 Standard and OZ9 Covert use the same frame and grip kits. The OZ9 Standard comes with the Standard grip kit which takes G17 mags and the Covert comes with our Shorty grip installed which takes G19 mags.

A longer holster should fit any guns or slides that are shorter and a shorter holster with an open bottom should fit any guns or slides that are longer. Some holster companies specify a “has threaded barrel” option which factors in the extra length of a standard threaded barrel.

Our ZEV Z19 threaded barrel is the same length as our Z17 non-threaded barrel. (Approx. 4.5 inches)

Our ZEV Z17 threaded barrel is 0.3 inches shorter than our Z34 non-threaded barrel. (Approx. 5 inches)

Our ZEV V2 Compensator is 1.25 inches long and requires a threaded barrel to install.

Duty/Retention Holsters

Safariland 6390RDS, 6377RDS, 6354RDS (w/ Weapon Light and correct length barrel plug)

->Older 6354DO Model will NOT work

Safariland 7378 or 7390 7TS ALS (Non-Optic) & Safariland 58X GLS (Open Bottom)

Blackhawk Omnivore (w/ Weapon Light)

Safariland Fitment

Safariland holsters require a correct barrel plug for the ALS mechanism to index correctly. As an example, our Z17 threaded barrels are only 5 inches long and a G34 barrel is 5.3 so a modified barrel plug is usually required for this configuration. A G19 or OZ9 Compact with a ZEV Threaded Barrel and V2 Compensator usually indexes correctly in a Safariland G34 length holster without modifications.

Many Safariland models use the same holster with a different mount so other similar models may fit.

<https://inside.safariland.com/education/threaded-barrels-and-muzzle-plugs/>

<https://store.otdefense.com/products/multimuzzle-plug-for-6000-series-holsters>

<https://store.otdefense.com/collections/nub-mods/products/6000-series-spacer>

The ZEV Spartan slide cut is not recommended in Safariland ALS holsters as the round slide cuts in the front will excessively wear the ALS mechanism.
